

Abdullah Rifak

Undergraduate software engineering intern

Software Engineering undergraduate with hands-on experience designing and deploying full-stack applications using MERN and ASP.NET Core. Strong foundation in OOP principles, RESTful API development, database design, and role-based system architecture. Experienced in building production-ready systems including a LAN-based POS platform and scalable backend services. Currently expanding knowledge in cloud computing (AWS) and AI-driven system integration. Seeking a 6–12 month internship to contribute to real-world software lifecycle development in Agile teams.

Individual Projects

POS & Supplier Tracking System | Freelance
Individual

 [github.com/Abdullah-Rifak](#)

React

Node.js

Express.js

MongoDB

Tauri

- Designed and deployed a cross-platform LAN-based desktop POS system with offline-first architecture
- Implemented secure REST APIs and structured backend logic using MVC principles.
- Architected role-based access control (Admin / Sales) with protected routes.
- Developed modules for inventory tracking, supplier management, expense logging, and profit analytics.
- Managed local MongoDB configuration and application packaging for production-ready deployment.

R & R Lankan Taxi | Freelance
Individual

 [Live demo: R & R Lankan Taxi](#)

HTML

CSS

JavaScript

Vercel

UI / UX

EmailJs

WCAG Standards

- Mobile-first responsive UI and clean desktop scaling with a full-width layout
- Domain configuration, DNS setup and deployment on Vercel with HTTPS enabled
- EmailJS integration for contact forms along with WCAG standards to boost accessibility
- Achieved a Google Lighthouse SEO score of 100, Set up Google Search Console and submitted the sitemap

Waste Auction & Bidding Platform | ASP.NET Core (In Progress)
Individual

 [2025–November– present](#)

C#

ASP.NET core

Entity Framework Core

REST APIs

- Designed the backend project structure following clean architecture principles
- Defined domain models, role-based access strategy, and API structure for collectors and recycling companies
- Set up Entity Framework Core, database configuration, and initial migrations
- Planned auction lifecycle logic including bidding windows and automatic closure

Academic & Group Projects

Eco-Harvest
Group

 [github/frontend](#)

 [github/backend](#)

React

MongoDB

Express.js

Node.js

Next.js

Tailwind CSS

- Developed a role-based, category-specific food listing module to dynamically filter products for companies.
- Implemented role-based, category-specific food listing functionality, ensuring companies only see products relevant to their registered category.
- Applied MVC architecture, RESTful APIs, and clean code practices to deliver a maintainable and scalable system.

Online Event Management System – Meetup

 [github/abdullah-rifak](#)

Java

MySQL

JSPServlets

HTML

CSS

- Developed a role-based web application for creating, scheduling, and managing events with dedicated dashboards for event managers and users.
- Implemented MVC architecture to ensure scalability, and clear separation of concerns..
- Applied clean code practices, structured database design, and RESTful principles.

Online Pet Care System– PetVersa

 [github/abdullah-rifak](#)

HTML5

CSS

PHP

MySql

JavaScript

- developed to connect pet owners and the doctors and seek the appointments from the professional pet doctors
- Implemented the website using Html,CSS, Javascript and php for backend , MySql for database
